Dialupass is a lightweight application that can scan your computer and detect all dial-up accounts, displaying them in a very clean interface along with all available information. This application has been designed to scan the computer and detect all dial-up accounts, displaying them in a very clean interface along with all available information. The main window is being used to show dial-up accounts information, so you can thus see entry name, phone and host, username and password, domain, password owner, password owner SID, phonebook file and password strength. Right-clicking on any of the available entries lets you save

---

and copy selected items, copy the password or generate a HTML report either with the selected or all items. Jumping into "Advanced Options" gives access to even more features, allowing you to extract the dialup password list from the local system and use a specific phonebook file. In addition, you can also extract the dialup password list from an external instance of Windows, but in this case you need to define the Windows directory and the profiles base folder. While Dialupass works just fine on all Windows versions, there's one important thing to be noted: it requires administrator privileges on Windows 7, as this is the only way to reveal dial-up passwords. All in all, Dialupass does what it says and provides quite an easy to use interface with very effective tools. There's no help file available in the package, but in most cases you don't even need one since everything's so intuitive. dialupass 5.0 Is there a way to get the command line version of dialupass Dialupass 5.0 review by: unoff. Jul 03, 2014 dialupass 5.0 is a neat program that allows you to detect all your dial up passwords (username, phone numbers, host, etc) Good dialupass 5.0, dialupass 5.0 lets you enter your username and password. It also creates a log file of all you entered. It also has options to find additional information like phonebook file, and many more. Dialupass 5.0 can detect all dialup accounts and keeps track of them in a clean interface. Dialupass 5.0 is a nice little program. It detects all your dialup account info and stores it for you. dialupass 5.0 by: Pippin. Jun 13, 2014 great app, makes finding accounts that you previously used easy, saves the username and has a log of them, no longer need to remember them! Also includes options to use a specific phonebook file. So far I have only found one issue, Dialupass 5.0 appears to need to be run on every computer you want to scan, it's a great program however. dialupass
